

# Montana Pesticide Stewardship Partnership Program

## MT PSPP

A collaborative network supporting efforts to improve water quality and engage communities in the Upper Columbia River Basin of Montana

**FLATHEAD LAKE  
BIO STATION**  
UNIVERSITY OF MONTANA

## Collaborate for Change

Build a network of experts, educators, communities, and stakeholders to work together to understand pesticide use and protect our waters through measurable action.

## Monitor

Collect surface water sample to analyze for pesticides across the basin. Understand existing pesticide pollution in the environment and how our efforts can improve water quality.

## Learn

As a network, create, distribute, and present educational materials to connect with all pesticide users. Including: pest identification, pesticide alternatives, responsible pesticides practices, environmental impact, and more.
